

GLOVE

PRODUCT INFORMATION

Gentle skin protection Long-lasting preservation for your hands

NP® Glove is a unique long-term protection for your hands. An ultra-thin, skin sensitive and 100 % biocompatible protection layer significantly reduces the adherence of dirt and microorganisms without containing any biocidal substances.

Your skin feels normal!
No impact on your tactile perception, the breathability and transpiration of your skin remain.

Long-lasting protection!
After the application of NP® Glove you may still wash your hands with soap several times per day and even use disinfectants. The invisible protection layer lasts for up to 24 hours and keeps your skin from dehydrating.

- Lasts up to 24 hours
- Reduces the adhesion of dirt and microorganisms

COMPOSITION

SiO₂ solved in ethanol (> 70 %), Alcohol denat., Tetraethyl Orthosilicate, Formic Acid, Aqua

STORAGE TEMPERATURE

+4 °C to +30 °C

SHELF LIFE

12 months

CONTAINERS

Container sizes on demand.

APPLICATION

NP® Glove is a ready-to-use solution. The application is processed via spraying.

The optimal result is achieved if the skin is free of dirt and grease as well as free of residues of other substances before the application.

For a consistent skin protection NP® Glove must be sprayed on all parts of the hands including spots that are often left out.

These are generally:

- Wrists
 - Fingertips
 - Nails
 - Spaces between the fingers
1. First spray 2 - 3 puffs of NP® Glove onto your hand and thoroughly rub your palms as well as the backs of your hands against each other.
 2. Interlock and rub your fingers in order to cover the spaces between them.
 3. Do not forget to apply NP® Glove on the area around your nails.
 4. By rubbing your fingertips against the palm of your hand, NP® Glove also reaches the hidden spots under your nails.
